

875 6th Avenue - Completed 2006.

Contegiacomo and Associates designed a vibrant metal and glass feature wall, for the Lobby of 875 6th Avenue, the offices of Sierra Realty. The feature wall incorporated a lightweight aluminum skeletal structure with two, four-foot by ten-foot operable glass doors to conceal building elevator and mechanical systems. The doors are side lit from a central spine and appear to hang like a kimono from the skeletal structure. Custom light coves were added to brighten the coffered ceiling and enhance the classical details of the existing lobby.
